

St. John the Baptist School
June 2021

Dear parents of incoming Second Graders,

Summer is here, which means, so is summer math work! In this summer work packet, I have attached a math packet that includes practice problems that the students are to complete this summer. The skills in the math packet are a review of what the students have learned in first grade.

In addition to the math packet, I have added 25 IXL skills modules that the students can complete during the summer. I have included the letter and number, along with the skill title. Students do not have to complete all these IXL skills but gives them the opportunity to get extra math practice and it helps reinforce what the students have learned throughout first grade. The IXL skills are optional work this summer.

The math packet must be completed and brought in the first day of second grade.

I hope you and your family have a safe and fun summer!
Happy math learning!

Have a wonderful summer,

Ms. Morin
